1882.

MEDICAL MISSIONARY SOCIETY'S HOSPITAL

M I N U T E S
OF THE
FORTY-THIRD ANNUAL MEETING
OF THE
Medical Missionary Society in China.

The Forty-third Annual Meeting of this Society was held in Canton, at the house of Messrs. Russell & Co., on the 26th of January, 1882. Present:—Mr. Gideon Nye, Senior Vice-President, in the chair; Mr. Theophilus Sampson; Rev. A. P. Happer, D.D.; Rev. George Piercy; Rev. E. Faber; Mr. T. B. Cunningham; Rev. Henry Parkes; Rev. R. H. Graves, M.D., D.D.; Rev. George Marris; Rev. B. C. Henry, M.A.; Rev. W. J. White; Rev. A. A. Fulton; Rev. J. C. Thomson, M.D.; Rev. H. V. Noyes; Dr. So To Ming; Mr. Kung King; and Dr. Kerr.

The Meeting was called to order by Mr. Nye, who upon taking the chair read the notice convening the members; and proposed that as the Minutes of the last Annual Meeting had been printed and circulated, they should be taken as read.

The Chairman then moved the confirmation of those Minutes, which was seconded by Mr. Cunningham and passed.

In submitting the Account Current of the Treasurers, the Chairman then called attention to an apparent discrepancy between it and that of Dr. Kerr, which was to be submitted presently, consisting in the respective items of \$100 charged in this as paid July 22nd, and that of \$200 credited in the account of Dr. Kerr as received in two orders in June; the explanation being that but one of the orders had been presented to Messrs. Russell & Co., the Treasurers, and that thus the other order is still pending to the credit of Dr. Kerr or his assigns: The following being a summary of Receipts and Payments during the year ending December 31st, 1881:—

When Dr. Kerr pays it he will be
entitled to it. to him by the

value as it was in the building of Ward

RECEIPTS.

Balance from the account of 1880.....	\$1,768.22
Bethel Fund donation, for balance of 1880, for 1881, and part of 1882	435.07
Subscriptions at Canton by the foreign community for 1881 as particularized in Report of last year	1,000.00
Subscriptions by H. E. the Viceroy and H.E. the Hoppo, each \$200	400.00
Donations from: A. R. Hewlett, Esq., \$25 ; Bishop Burdon \$25	50.00
Donation from others in lesser sums to Dr. Kerr	70.00
Donation from Messrs. Burgoyne & Co. \$10, Tai On Co. \$10, and a friend to Dr. Kerr \$15	35.00
Receipts from Patients, sales of books, medicines, &c., paid in by Dr. Kerr	831.15
Balance of Interest account	130.38
	<u>\$4,719.82</u>

PAYMENTS.

Orders of Theophilus Sampson, Esq., Chairman of Managing Committee, for current expenses of the Hospital and Dispensaries and for buildings	2,795.00
Balance, to Credit in new account.....	1,924.82
	<u>\$4,719.82</u>

On the motion of Mr. Sampson, seconded by Mr. Piercy, the Treasurers' Account was accepted.

Dr. Kerr then proceeded to report upon the work of the Hospital and dispensaries during the past year, and read the following abstracts from the records:—

“The regular work of the Hospital in Canton has been continued during the year, with the following results:—

AT CANTON.

	<i>Males.</i>	<i>Females.</i>	<i>Totals.</i>
Out-patients	15,852	3,480	19,332
In-patients	724	340	1,064
Surgical operations			1,115
Vaccinations			194

AT SAI-NAM.

Out-patients	1,145
Operations.....	31
Vaccinations	70

About the usual number of important and minor surgical operations have been performed.

The new block of Wards projected at the last meeting has

been completed, and since then occupied much of the time by paying patients.

The instruction of the Medical Class has been continued as usual.

Two writers have been employed in the translation of Medical books. A treatise on Inflammation and one on Fevers have been published; and other works are in course of preparation.

Religious Services have been conducted by the Rev. B. C. Henry, M.A., assisted by native Evangelists. The Wards for women have been visited by several Ladies.

The expenditures and receipts are summarised as follows:

DEBIT.

For Balance due in last year's account.....	\$ 2.88
„ Current expenses.....	1,390.60
„ Printing Medical Books and cutting blocks	153.61
„ Amount paid the Treasurers for sales of Books, &c.	831.15
„ Amount paid for New Wards.....	1,224.53
„ „ „ Furniture	51.38
„ „ „ Rev. E. Z. Simmons for Dis- pensaries,	100.00
	<hr/>
	\$3,754.15
	<hr/> <hr/>

CREDIT.

Amount of orders on the Treasurers, Messrs. Russell & Co., at various times	\$2,895.00
Cash received for Books, Fees, Medicines, Rent, &c.,	831.15
Balance to debit in new account	28.00
	<hr/>
	\$3,754.15
	<hr/> <hr/>

The thanks of the Society are due to Dr. Ayres of Hong-kong and to the Bombay Medical Department for Vaccine and Bovine lymph; to Miss Noyes and Ladies in America for Pictures put up in the Wards; to Mr. C. C. Jeremiassen for a clock for the Chapel; and to Messrs. De Souza & Co. for moderate charge for printing the annual Report.

My thanks are due to Mr. Jeremiassen, also, for his careful oversight of the Hospital during my absence on a trip to Lien Chow, and to Dr. Carrow for assistance rendered at that and other times.

My thanks are also due to my associates of the Committee of Management for their cordial co-operation and assistance in every effort to increase the efficiency of the Hospital."

It was then moved by Mr. Sampson, seconded by Mr.

White, that Dr. Kerr's report be approved and the usual number of copies ordered to be printed in English and in Chinese.

The Report of the Managing Committee was then presented by Mr. Sampson, the chairman thereof, as follows :—

Report of the Committee of Management of the Medical Missionary Society in China for the year 1881 :—

“The Committee have the pleasure to report the continued prosperity of the Society, both as regards finances and its eminent usefulness to the Chinese who resort to the Hospital. For the former thanks are due to the liberality of Chinese and foreign contributors, and for the latter the Society is indebted to the skill, tact, and energy of Dr. Kerr, the physician in charge of the Society's Hospital : As regards the financial condition of the Society, however, it should be remarked that some of the older buildings will soon need extensive repairs which may involve a serious outlay. In their last report the Committee recommended the building of additional wards suitable for paying patients, and for this purpose the sum of \$1,000 was voted at the last annual meeting. A row of wards, comprising six rooms on the ground floor and a like number on an upper story, has been erected, affording very suitable accommodations for Foreign or Chinese patients. The Committee have exceeded the appropriation for this work by \$227.00, and they have to ask the Society's approval of their having done so.

“An old and distinguished friend of the Society, now residing in his native country, has intimated his intention of presenting a sum of about \$1,500 to be used for some special purpose not yet decided on. The matter still forms the subject of a correspondence with the generous donor, and the Committee therefore do not at present feel at liberty to say more concerning it than that his wish is that the money be so spent as to form a lasting memorial of the late Rev. C. F. Preston, who was for many years intimately connected with the Society's work.”

This report was, upon the motion of Mr. Marris, seconded by Mr. Fulton, approved and accepted, inclusive of the additional expenditure therein explained.

In further explanation of the statement in the Committee's report respecting a large donation to the Society with a specific object and subject to certain defined restrictions, but otherwise disposable according to the judgment of the members of the Society on the spot directed to the fulfilment of the donor's purpose; the Chairman submitted to the Meeting an extract of the latest letter yet received here from that gentleman,—(Prof. S. Wells Williams, L.L.D., Senior Vice-President of the Society, and now of Yale College)—

addressed to himself and dated September 28th last, wherein the limitations of the grant are defined and scope otherwise accorded. Whereupon, after full discussion upon the present position of the grant and cordial appreciation of the munificent act of the generous donor, during which it was pointed out that no portion of the sum is to be used for the current expenses of the Hospital, it was moved by Dr. Happer, seconded by Mr. Piercy, "That an extract of a letter from Professor S. Wells Williams, L.L.D., Senior Vice-President of this Society, having been submitted to this Meeting, stating his wish and purpose to donate to this Society the sum of fifteen hundred dollars (\$1,500) for the purpose of some permanent improvement, as a Memorial of the late Rev. C. F. Preston—it is resolved that this Society accept the said donation with the trust that it implies, and tenders to the munificent donor the grateful acknowledgments of its representatives here present."

On the motion of the Chairman, seconded by Mr. Noyes, the Members of the Managing Committee of last year were re-elected for this year; namely, Mr. Sampson, Mr. Faber, Mr. Cunningham, Mr. Henry and Dr. Kerr.

The Estimates for the current year's disbursements were then presented by Mr. Sampson as follows:—

For current expenses of Hospital and Dispensaries	\$1,400
„ printing books and cutting blocks	200
„ Repairs	150
„ Teacher and Translator	240
„ Rev. R. H. Graves, D.D., for Sai Nam, &c. ...	120
	<hr/>
	<u>\$2,110</u>

It was then moved by Mr. Sampson, seconded by Dr. Happer, that the Committee be authorized to expend the available means on the basis of these Estimates.

The Chairman then called attention to the death of Sir Brooke Robertson, and remarked as follows:—

Before proceeding to the usual election of officers, it is my duty to invite your attention, gentlemen, to the loss sustained by the Society in the death of one of its oldest Vice-Presidents, who had many times acted as Chairman of our annual meetings; Sir Daniel Brooke Robertson, C.B., K.C.M.G., who died at London early last year at the age of 71 years.

It will be in the recollection of most gentlemen present that it was about four years ago when the foreign community of Canton, with complete unanimity, participated in addresses and generally attended a farewell leave-taking of

this lamented gentleman at Concordia Hall, when his public services and private courtesy were cordially acknowledged and a general expression of the sense of the community toward him was communicated to the public papers; upon the occasion of his departure for England upon leave, preparatory to his assumption of the office of Her Britannic Majesty's Consul General at Shanghai. Those proceedings are noticed, along with a sketch of his official career, in the issue of the "Far East" of February 1878, that I now hand you for the information of those now present who were not here at that time. Having participated, as the most of us did, in those public tributes to his character and abilities, it is befitting to ourselves, in noticing the close of his distinguished career, to abstain from words of superfluous eulogy; yet it is our duty, as it is also our inclination, to record upon the minutes of this meeting for the archives of the Society, a full recognition of the value of his many services and constant sympathy in aiding the fulfilment of its purposes. Those personal services extended over a considerable period, and expressions of his continued sympathy were sent by letter to myself, and I believe to others also, after his arrival in England, where at length he died, keenly regretting his inability to return to China.

I may also advert to a distinct expression of Sir Brooke's sympathy with the purposes of the Society, and the testimony he bore at the meeting of January 17th 1878—(the last before he left China)—to the fact, also, that the general cause of Missions here was in good hands and so acknowledged by the higher native authorities. (The Minutes of which meeting I now hand you).

I have prepared a rough draft of resolutions upon the sad event, which I submit to your emendation and amplification; but I earnestly invite, also, each of the gentlemen present who knew him well, as several did,—(though my acquaintance with him, begun in the winter of 1851-52, may ante-date others somewhat),—to accord their tributes to the memory of our late worthy colleague.

After brief addresses by Dr. Happer, Mr. Piercy, Mr. Sampson, and Dr. Kerr, appreciative of the high character of the deceased and of his direct assistance as well as great influence in promotion of the Society's usefulness, the Chairman moved, seconded by Mr. Piercy, the following resolutions, which were voted unanimously:—

Whereas, in the Providence of God, the distinguished career of Sir Daniel Brooke Robertson, C.B., K.C.M.G., one of the Vice-Presidents of this Society, ended by his death at London on the 27th March 1881, at the age of 71 years: And Whereas, he had long held that office and repeatedly

acted as Chairman of its annual Meetings, and in other ways contributed to its prosperity :—Therefore be it

Resolved, 1.—That this Society hereby recognizes the worthy career of its said Vice-President in the spheres of official and private life ; and acknowledges the value of the aid he rendered,—with unflagging sympathy and thoughtfulness,—to its purposes of benevolence during a considerable period of time.

Resolved, 2.—That the regret we feel at the loss of an officer so capable, influential and sympathetic, be communicated to his son, Mr. Russell Robertson, Her Britannic Majesty's Consul at Yokohama, with the assurance of the sympathy of the members of this meeting in his affliction.

On proceeding to the annual election of officers for the year, the Chairman moved, and Mr. Henry seconded, the reelection of those holding the respective posts last year, with the exception of Hon. W. Keswick and H. Lowcock, Esq., who have left China, and E. McKean, Esq., who has become a resident of Peking ; and the substitution of Hon. F. B. Johnson for the first-named, and of Mr. F. E. Woodruff for Mr. McKean, as Vice-Presidents : The office bearers for 1882 being, therefore, the following :—Hon. Peter Parker, M.D., R.S.L., President ; Professor S. Wells Williams, L.L.D., Senior Vice-President ; John G. Kerr, M.D., Second Vice-President ; Vice-Presidents, Mr. G. Nye ; Hon. F. B. Johnson ; Mr. W. H. Forbes ; Hon. P. Ryrie ; Mr. H. L. Dalrymple ; Mr. E. Deacon ; Mr. G. B. Glover ; Mr. T. Sampson ; Rev. A. P. Happer, D.D. ; Rev. John Chalmers, L.L.D. ; Rev. George Piercy ; Rev. R. H. Graves, M.D., D.D., ; Mr. T. B. Cunningham ; Mr. F. E. Woodruff ; Mr. A. Rowe ; Mr. A. R. Hewlett, H. B. M. Consul ; Mr. W. L. Scruggs, U. S. Consul. In Europe :—Rev. Professor Legge, D.D., L.L.D. ; Ven. Archdeacon Gray, L.L.D. ; Mr. Richard von Carlowitz : In United States Mr. W. Delano.

Secretary—J. G. Kerr, M.D.

Treasurers—Messrs. Russell & Co.

Auditor—The Commissioner of Customs, Acting.

The Chairman then moved a vote of thanks, seconded by Mr. Faber, to Messrs. Russell & Co. as Treasurers ; Messrs. De Souza & Co. for printing at moderate charge the Reports ; to Miss Noyes and her lady friends in America ; to Dr. Carrow ; to Dr. Ayres ; the Bombay Vaccine Committee ; Mr. Jeremiassen ; Mr. Bain ; Mr. Wilcox ; and to the Managing Committee ; and specially to Dr. Kerr.

Thanks to the Chairman, moved by Mr. Noyes, closed the meeting.

J. G. KERR,

Secretary.

GIDEON NYE,

Chairman.

REPORT
OF THE
Medical Missionary Society's Hospital
IN
CANTON,
FOR THE YEAR 1881.

BY

J. G. KERR, M.D.

The work of the Hospital has been carried on through another year, with nothing of special interest beyond the usual routine of daily duties. As will be seen from the tables given below, the attendance of out-patients, and the number of in-patients admitted have not varied much from that of recent years.

The new wards voted at the last annual meeting, have been erected, and make an addition of 12 rooms, which are well ventilated, light, and airy. These are intended for the better class of patients who wish to have accommodations apart from the common wards, and are able to pay a small sum for the privilege. The demand for these rooms even before they were finished, shows that they are an important addition to the hospital. Those on the upper floor are also suitable for European patients, and in this respect fill a want which has been felt on several occasions.

A plan of the Hospital grounds is appended to this Report. The lot is 480 feet deep by 82 wide, and the location is one of the best that could be had in the city.

The following table gives, under different headings, an outline of work in the hospital during the year. The regular days for out-patients are Mondays and Fridays, but it will be seen that about one-third of the whole were received on irregular days. There are many who come from a distance, and some of them are weak and in need of immediate attention. To prevent hardship and disappointment to such, it is necessary to attend to all who come, although not a little extra trouble and work are incurred.

Table No. 2 gives a list of the surgical operations, and following this are tabular statements of operations for urinary calculus.

No. 1.

URINARY CALCULI.—A larger number of cases have been operated on for this disease than in any former year. About 100 patients were admitted to the wards, but over thirty left without submitting to the operation and two died, worn out with the long-continued suffering.

The tabular statements annexed give the particulars of all the cases, and it is only necessary to add a few remarks in reference to two or three.

In case No. 19 an attempt was made to crush the stone, but it was found impossible to do so on account of its extreme hardness. It was therefore removed by cutting, with a favorable result.

A boy, No. 35, had been operated on two years before, but the stone formed again. He was dismissed cured after the second operation, but with a tendency to cystitis, and if this continues, he may have the misfortune of having a third stone.

Case No. 2 had suffered from symptoms of stone for 10 years. Two calculi were found in the urethra. The bladder was divided into two cavities by a septum and the stone was lodged in the anterior one, near the neck of the bladder. In the mucous membrane around the neck, several excrescences had formed, prominent, soft and uneven to the finger. He recovered without any unfavorable symptoms.

More or less preparatory treatment is required in all the cases, but it is necessary to take all boys through a course for worms, before operating on them. Not less than 576 worms have been passed by these patients. The fact that they are thus troubled shows the bad state of health which favors the formation of stone, and it is necessary to keep some of them under treatment from two to four months, before they are in a suitable state for operation.

The operation of lithotomy was performed once, with a successful result by Dr. So To Ming, during my absence in Lin Chau. He also performed lithotrity in another case but the man unfortunately died.

LITHOTRITY.—This operation has been resorted to in 29 cases, and in 8 of them Bigelow's evacuating apparatus was used. The rubber bulb was broken in the early part of the year, and a new one arrived in a damaged condition. The results attending this mode of removing the stone have not been so favourable as was anticipated when the apparatus for removing the debris was first employed. There are some bladders which will bear the long irritation of repeated crushings and evacuations, but there are others in which the slightest handling will light up intense inflammation, or bring on some form of disease, the germs of which may be in the system at the

time. Some years ago, the simple act of sounding brought on malignant fever which was fatal in 3 or 4 days. During the present year the operation of sounding was followed by profuse hemorrhage from the bladder, which continued several days and was attended with fever, which may have proved fatal, as the patient was removed from the hospital while still very low. Another patient, on whom I was about to perform lithotripsy has now a severe attack of acute cystitis attended with hemorrhage for four or five days.

After the extended experience in this hospital, it is found exceedingly difficult to decide in some cases, which operation to choose, and I believe that some patients who have died under one mode of operating would have recovered if the other had been employed.

TUMOR OF PAROTID SPACE.—A man, 34 years old, from Tung Kun was admitted with a large tumor on the right side of his face and neck. By reason of its size and weight it was an unsightly incumbrance. It was removed on the 14th of February, and weighed $3\frac{1}{2}$ lbs. The patient made a favourable recovery, and returned to his home greatly delighted to be relieved of his appendage, which he was assured would not return. He has visited the hospital several times since, and brought other patients. The cut on page 16 gives a good representation of the case, except that the artist has got the tumor on the wrong side.

AMPUTATION OF LEG.—A boy, aged 12 years, from Hong-kong, had been in the hospital for several months with suppurative disease of the left ankle joint. Finding all means of relief unavailing, the leg was amputated on July 14th. Esmark's bandage was used and very little blood was lost. The boy had been reduced very much by the long-continued confinement and suppuration, but the recovery was favorable, excepting fever for a few days. In three or four weeks he was moving about the hospital on crutches, very happy to be free from his confinement and suffering. He was dismissed in the enjoyment of good health.

AMPUTATION OF ARM.—A man, 72 years old, had his left hand blown to pieces while firing a salute at the little north gate. It was amputated below the elbow, but slonghing took place and he died on the 12th day.

GUNSHOT WOUND WITH COMPOUND FRACTURE OF THE FEMUR.—A man, 32 years old, a native of Ko-chau was admitted with compound fracture of the right thigh, caused by a bullet which entered from behind and made its exit from the anterior surface of the limb. The wound was accidentally inflicted by the Chinese soldiers practising with rifles near the N.E. gate of the city. The injury was followed by swelling suppuration and fever, but these gradually subsided and and in 70 days the openings were closed. On account of the difficulty of making the patient submit to extension, the limb is shortened and somewhat deformed, but now 90 days from the infliction of the wound he is walking about with the aid of a staff.

TUMOR OF TONGUE.—A female aged 60 years, from Fa-ün, was admitted with a tumor on the left side of the tongue, oval in shape, and large enough to fill up the mouth. It was not painful, but an incumbrance of this kind, as large as an orange, interfered with all the functions of the organ, especially in an old woman, and had done so for 15 years, when she applied for relief. The dissection of the tumor (Dec. 21st) was a very simple work, requiring only incisions above and below about two inches in length, through the

黃耀文東莞人年方三十五歲患左腮肉瘤症起十三年大如
柚子後到本局就醫于是年正月割重二斤十三兩全愈而去

未割之形圖

已割之形圖

mucous membranes and the separation of slight attachment to the substance of the tongue. In a few days the wound healed and she returned home relieved of a great nuisance.

NECROSIS.—On the 22nd of March a boy, 16 years, was operated on for necrosis of the tibia. The bone was trephined, and several fragments of dead bone extracted.

A man, 25 years old from San Hing, was admitted with necrosis of the lower jaw, from which there had been a very offensive discharge for a year. The removal of a large fragment of the bone on the 8th of March, was followed by cure in a short time.

While in Lin chow two similar cases were operated on, which, with some operations on the eye, excited much interest, as they were the first surgical operations ever performed in that region.

NECROSIS OF LEFT HALF OF LOWER JAW.—On the 27th June, a man was admitted among the out-patients, with the left half of his lower jaw hanging by the side of his neck. The condyle was still attached, but the entire fragment of bone was necrosed, dry and black. It had worked its way out from the chin to the angle of the jaw, and an unsightly depressed scar was left. It was easily removed with a pair of forceps, and the opening left by the condyle no doubt soon closed up. The process of ulcerating through the tissues had occupied several months.

HYDROCEPHALUS.—A child which had been under observation as an out-patient was admitted into the wards with great enlargement of the head. The measurements on May 10th were :—

Circumference	33 inches,
From ear to ear over crown	22 "
From root of nose to nape of neck	25 "

It lived only a few days after entering the hospital. A *post-mortem* examination was made, and the case afforded an opportunity of showing the pupils the structure of the brain and the origin of the cranial nerves.

A man from the western suburbs came to consult me about a similar case, and on showing him a photograph of the above case he recognised the exact likeness. I could give him no hope of a cure.

TETANUS.—A man aged 43, a native of Fokien Province, was admitted in December with fracture of the left leg, above the ankle, of 30 days standing, and with symptoms of lockjaw. These had commenced some five days previously and on admission there were cramps of the legs and arms, with rigidity of the jaw. The treatment was milk diet with bromide of potassium and chloral hydrate. After some days the severity of the symptoms began to subside and in

two weeks he was able to take food, and in another fortnight he had recovered so far as to be able to return to his home.

The only other case of recovery from tetanus that has come under my notice was an European, who was under the care of the late Dr. Wong and myself some 20 years ago.

THE MEDICAL CLASS.—The number of pupils on the roll of the medical class was 12, of whom 3 were females. There were several other applications, but the fee required was an obstacle. The transition from a free to a paying basis is attended with some difficulty, but it is for the best interests of the hospital as well as of the students, that those who are able to do so, should pay for the education which fits them for a lucrative employment. It is very desirable that scholarships should be established for the benefit of such young men and women of promising talents as are not able to pay the expenses incurred during their course of study. There are many such in China, as well as in other lands.

The want of regular dissection is much felt, but the use of colored anatomical plates is supplemented by the dissection of parts of the body before the medical class. A *post-mortem* examination of the child that died of dropsy of the brain, was made and the brain with the origin of the cranial nerves was exhibited to the class. On another occasion the perineum was dissected and the operation of lithotomy demonstrated. In a child which died from congenital absence of the anus, the course of the fetal circulation was shown. Occasionally an arm or a leg is hastily dissected in which they see the muscles, vessels and nerves.

The following statement by Dr. Graves may be taken as an impartial judgment of the progress made by the pupils :—

“Having been invited by Dr. Kerr to be present at the examination of the medical students at the Hospital previous to the suspension of class exercises for Chinese New Year, I take great pleasure in bearing my testimony to the encouraging results of the pains-taking instruction offered the students. We asked them various questions on Anatomy, Physiology, Practice and *Materia Medica*, and the students who have been longest at the hospital evinced a thorough and accurate knowledge of the ground they had gone over, while the others, including two female students, also showed that they had been under good instruction. In Chemistry several of the students performed interesting experiments in Qualitative Analysis, evincing an encouraging practical knowledge of the science.

“My only regret was that the class was not larger. It will be a happy day for China when its young men who contemplate the practice of medicine will avail themselves of

the advantages offered them by the careful training afforded by Dr. Kerr and his assistants, and when the present empirical practice will be supplanted by a true scientific knowledge of disease and its treatment."

TRANSLATION OF MEDICAL BOOKS.—In this department I have had the assistance of Mr. Kung King, a young man who has been for several years under Mr. Sampson's instruction in the Tung Man School. With some assistance from me, he is able to translate from English into Chinese. His work is then revised three times by myself and Yü S. S. a Chinese scholar, before it is printed. In this way a work on operative surgery has been translated and is partly printed, and a work on practical medicine is in process of preparation, a part of which (on Fevers) has been published, and a second part is now in press.

OPIMUM SMOKERS.—The Records of the hospital show that there has been a falling off in the numbers of those applying for the relief of the "opium habit." Some years ago a ward was almost always full of this class of patients, but during the present year only 36 were admitted, and of these 12 left within a few days, forfeiting the deposit money and returning to the pipe.

Whatever may be the causes of this falling off, there is no doubt but the desire to get rid of the vicious habit is almost universal among its victims, and they are willing to try any means which holds out hopes of relief from their bondage. All would prefer an easy way without suffering, and some will endure the horrors, but the dread of these is the cause of the vast majority continuing life-long slaves of the habit.

The nostrums of the native doctors are innumerable, and the anti-opium medicines presented by foreigners are eagerly sought for. Any Asylum for opium smokers is largely attended for a time, but the experience of this hospital will no doubt be repeated in all Asylums. Many of the apparent cures are not real. The patients have so many devices to get opiates when they begin to suffer from the horrors that the most wary physician may be deceived. A large number of those who do give up the habit for a time, have not the moral courage to resist the alluring temptations by which they are surrounded, and like the reformed drunkard, they easily fall again into the habit, only to become more confirmed in the use of the ruinous drug.

The observation of many years has satisfied me that the opium habit among the Chinese, once formed is sure, in the vast majority of cases to cling to its victim during life. Indulged in as a luxury when prosperous, it cannot be cast off even in poverty and beggary. The efforts of philanthropists

should therefore be directed to some means for preventing young men from acquiring the vicious habit.

NATIVE BENEVOLENT INSTITUTIONS.—Since the establishment in Hongkong of the Tung Wa Hospital and the Native Dispensary (愛育堂) in Canton, several other institutions have been opened. One of these, intended to be a hospital, is located in the northern part of the old city, and is known as the Fong Pin Sho (方便所) or Place of Charity.

There are twenty rooms for patients, each of which is six feet by eight, closed on three sides, and would doubtless have been closed on the fourth, but for the necessity of having a door. They are however open at the top which admits of some ventilation. Besides the rooms for the managers of the institution, there are four rooms in a separate enclosure for dead bodies, which, it will be seen by the statistics are more in demand than the others.

The Report for 1880 shows the following figures :—

	<i>Males.</i>	<i>Females.</i>
Admitted	374	130
Died	242	88
Discharged.....	132	42

Thus it will be seen that about two thirds of all those admitted are fatal cases. It is to be said however, that a large number of the cases are persons picked up in the streets in a dying condition; but it is a step in advance to reduce the number of those who were left to die of hunger or cold in the streets.

The income of the institution for 1880 was \$2,886.87, and the expenditures \$845.37—to which is to be added the cost of 256 coffins furnished by Oi Yuk-tong. 74 were buried at the expense of friends. The Viceroy and many of the Chief Officials give regular monthly subscriptions.

A dispensary with the name Tsap Shin-tong (集善堂) or Hall of accumulated good, has been opened during the year, and out-patients are received daily.

An association of a somewhat different character has been formed with an office in Sai Hing Street, the object of which is to collect money for the support of vaccination, the expounding of the Sacred Edict and the collection of written paper in the District of Hok Shan. Circulars have been issued explaining these objects and giving the rules and regulations for the guidance of those employed in carrying them out. Fifteen places in the District are to be selected for vaccination, and the expounding of the Sacred Edict is to be done at assembly halls and in temples. More than

\$20,000 have been subscribed for the above association and with good management, a single district can be well worked if the right kind of men are to be had.

RELIGIOUS WORK IN THE HOSPITAL.—The Rev. B. C. Henry has been as heretofore in charge of the religious work of the hospital, and he has kindly furnished the following statement:—Daily morning services have been held for the patients and special services twice a week on prescribing days for the out-patients. During part of the year when the patients were most numerous evening meetings were also held. Besides the regular services in the chapel the wards have been visited daily by the assistants and Bible women and frequently by myself and the Ladies of the mission. Books and tracts to the number of 7,250 have been distributed among the patients and much good accomplished. During the year 13 of the patients, two who came as attendants, one who had heard in previous years and one of the medical students, (17 in all) were baptised. Seven others have applied for baptism, but have not yet been received, and many have gone back to their homes with favorable impressions of the gospel.

REPORT
OF THE
MEDICAL MISSIONARY SOCIETY'S DISPENSARY
AT SAI NAM, FOR 1881.
BY R. H. GRAVES, M.D.

During my late absence in America my colleague, Rev. E. Z. Simmons, has looked after the Medical Missionary Society's Dispensary at Sai Nam. A larger and better-situated house has been secured and the congregations are much larger than formerly. The sales of Christian books have also greatly increased.

Mr. Ch'an, the medical assistant in charge, has attended to his usual duties and sends the following report of his work at Sai Nam and the North River, &c., during the past years :

Patients,—Sai Nam,.....	1,020
North River, &c.,	125
	<hr/>
Total,.....	1,145
	<hr/>

Among the cases treated we notes as follows :—

Vaccinations.....	70
Inflamed Eyes	80
Dyspepsia.....	70
Dropsy and other sequelae of Intermittent Fever	} 117
Removal of bullet	
Slit Ears restored	8
Harelip.....	1
Tumors removed	2
Operation for Entropium	25
" " Glaucoma	4

We contemplate some changes next year, among them an attempt to open a dispensary at the important town of Sz-hi in connection with the Sai Nam work.

The following Financial Report has been handed me by Mr. Simmons :—

Salary of Head Assistant	\$ 54.00
Rent of Dispensary and Chapel	42.63
Traveling Expenses.....	10.32
Incidentals	22.76
	<hr/>
	\$129 73
On hand from 1880.....	\$ 33.23
Appropriation, 1881, per Dr. Kerr	100.00
	<hr/>
	\$133.23
	129.73
	<hr/>
On hand January 1st, 1882,	\$ 3.50

Respectfully submitted,

R. H. GRAVES.
